

# Digital I/O Daughter Board

## User Manual

Version 3.1  
March 2012

### Warranty

All products manufactured by ICP DAS are warranted against defective materials for a period of one year from the date of delivery to the original purchaser.

### Warning

ICP DAS assumes no liability for damages consequent to the use of this product. ICP DAS reserves the right to change this manual at any time without notice. The information furnished by ICP DAS is believed to be accurate and reliable. However, no responsibility is assumed by ICP DAS for its use, nor for any infringements of patents or other rights of third parties resulting from its use.

# 1. DIO Daughter Board

We provide all kind magnetic relay, SSR, open-collector, PhotoMos relay and isolated digital input, daughter boards for I/O control applications.

## 1.1. How to Select Daughter Board

You must make sure which digital I/O board you choose and what kind applications you designed. Then select suitable daughter board.

### ■ Selection criteria for output type daughter board

1. Type of contact load  
AC or DC? ; Resistive or inductive or capacitive or lamp? ; Occurrence of back electromotive force or inrush current?
2. Level of contact load.  
Power load or small signal?
3. Coil rated voltage  
 $12\text{ V}_{\text{DC}}$  or  $24\text{ V}_{\text{DC}}$ ?
4. Frequency in switching operation
5. Demand for life in switching operation
6. Connector type of digital I/O board  
20-pin or 50-pin Flat cable or D-sub cable?
7. Mounting  
Panel mounting or DIN-rail mounting

### ■ Selection criteria for input type daughter board

1. Type of input signal  
AC or DC? Dry contact or wet contact?
2. Level of input signal
3. Connector type of digital I/O board  
20-pin or 50-pin Flat connector or D-sub connector?
4. Mounting  
Panel mounting or DIN-rail mounting

## 1.2. Selection Table

# DB-16R

*16-channel Relay Output Board*

## 2. Functional Description

The DB-16R, 16-channel Relay Output Board, consists of 16 form c relays for efficient switch of load by programmed control. It is connector and functionally compatible with 785 series board but with industrial type terminal block. The DB-16R can be connected to DIO-64, A-626, A82x DAS board and PCI-series multi-function board or any other compatible DAS board. The relay are energized by apply 5 volt signal to the appropriate relay channel on the 20-pin flat cable connector. 16 enunciator LEDs, one for each relay, light when their associated relay is activated. To avoid overloading your PC's power supply, this board provides a screw terminal for external power supply.

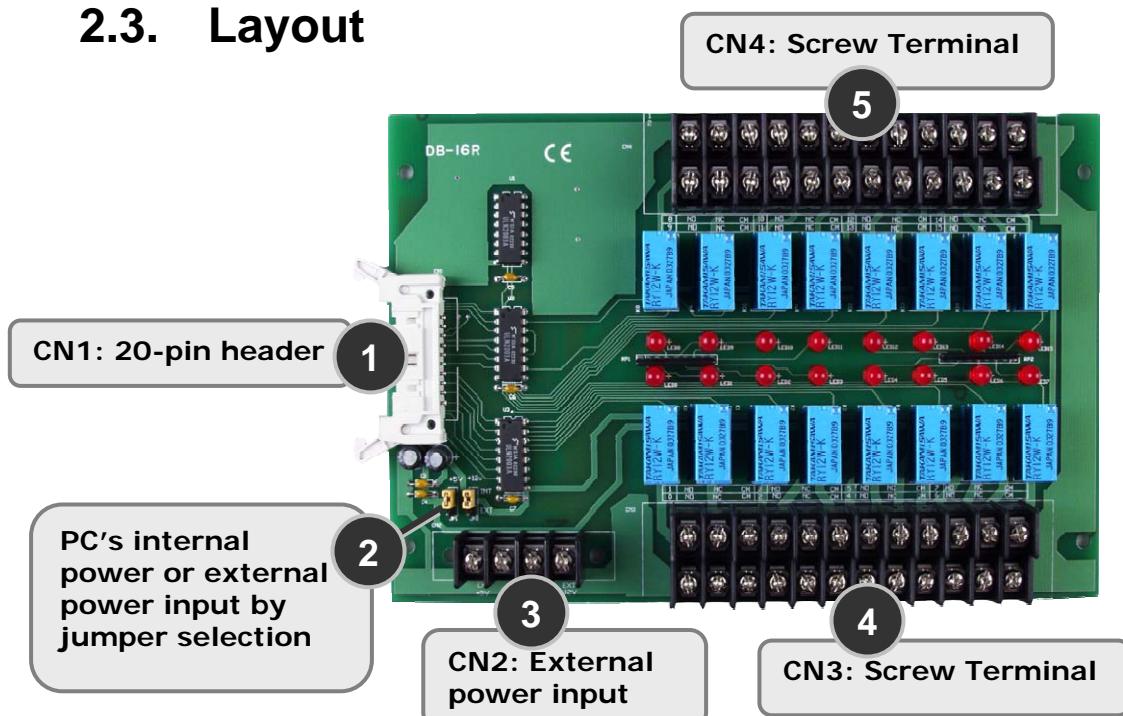

### 2.1. Features

- 16-channel relay output board
- 16 Form C Relays
- Accept 20-pin connector to control 16 Form C relays, for use with A-82x, A-62x, DIO-64, PCI-1800, PCI-1200 and PCI-1002 series digital output port or any compatible digital output port.
- LED status indicator
- Screw terminals for field wiring

## 2.2. Specification

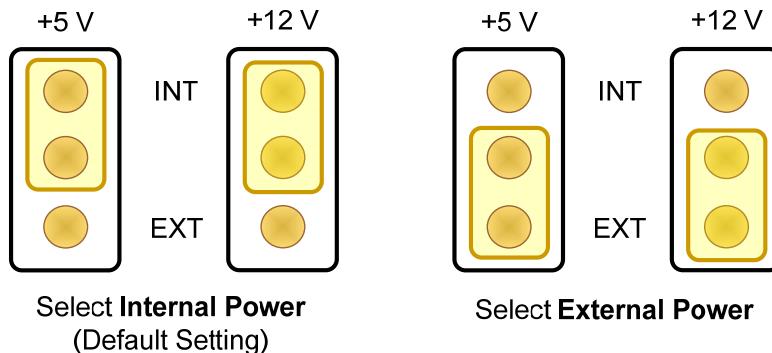

<b>Relay Output</b>		
Channels	16	
Type	Form C	
Nominal Load	0.5 A/120 V <sub>AC</sub> 1 A /24 V <sub>DC</sub>	
Max. Switching Power	60 VA, 24 W	
Max. Switching Voltage	120 V <sub>AC</sub> , 60 V <sub>DC</sub>	
Max. Switching Current	1 A	
Life Expectancy	Electrical (20 Millions Times )	
Time Value	Operate	6 ms
	Release	3 ms
Control Logic	Input TTL high (+5 V), Relay ON	
<b>General</b>		
Dimensions (L x W)	205 mm x 114 mm	
<b>Environment</b>		
Operating Temperature	0 ~ +60°C	
Storage Temperature	-20 ~ +70°C	
Humidity	5% ~ 90% RH, non condensing	
<b>Power Requirements</b>		
Power Consumption	2 V /0.53 A	
	5 V /0.2 A	

## 2.3. Layout

## 2.4. Jumper Setting

DB-16R PC's internal power or external power input by jumper selection.

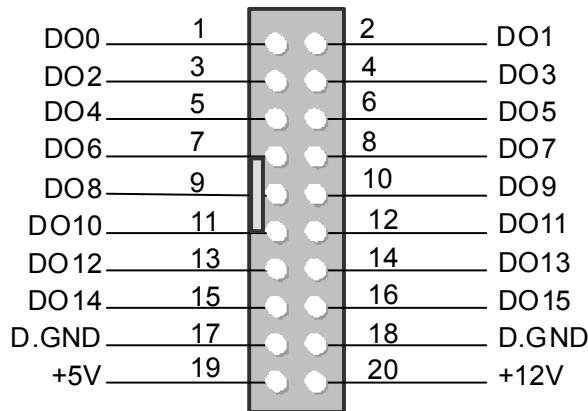

**Note:**

**INT: Internal Power Source; EXT: External Power Source.**

Don't install too much DB-16R in one PC if the jumper is set in the internal power. Some PC's power supply is small and used to power PC only. The power supply will be damaged, if install too much DB-16R and using internal power. You should calculate the power consumption of DB-16R and to make sure which setting is better.

## 2.5. Pin Assignment

- CN1: 20-pin header linked to TTL digital I/O board via 20-pin flat cable.

- CN2: External power input connector for external power input wiring.

Note: Don't wiring to external power input connector if the power selection jumper setting in < INT > position.

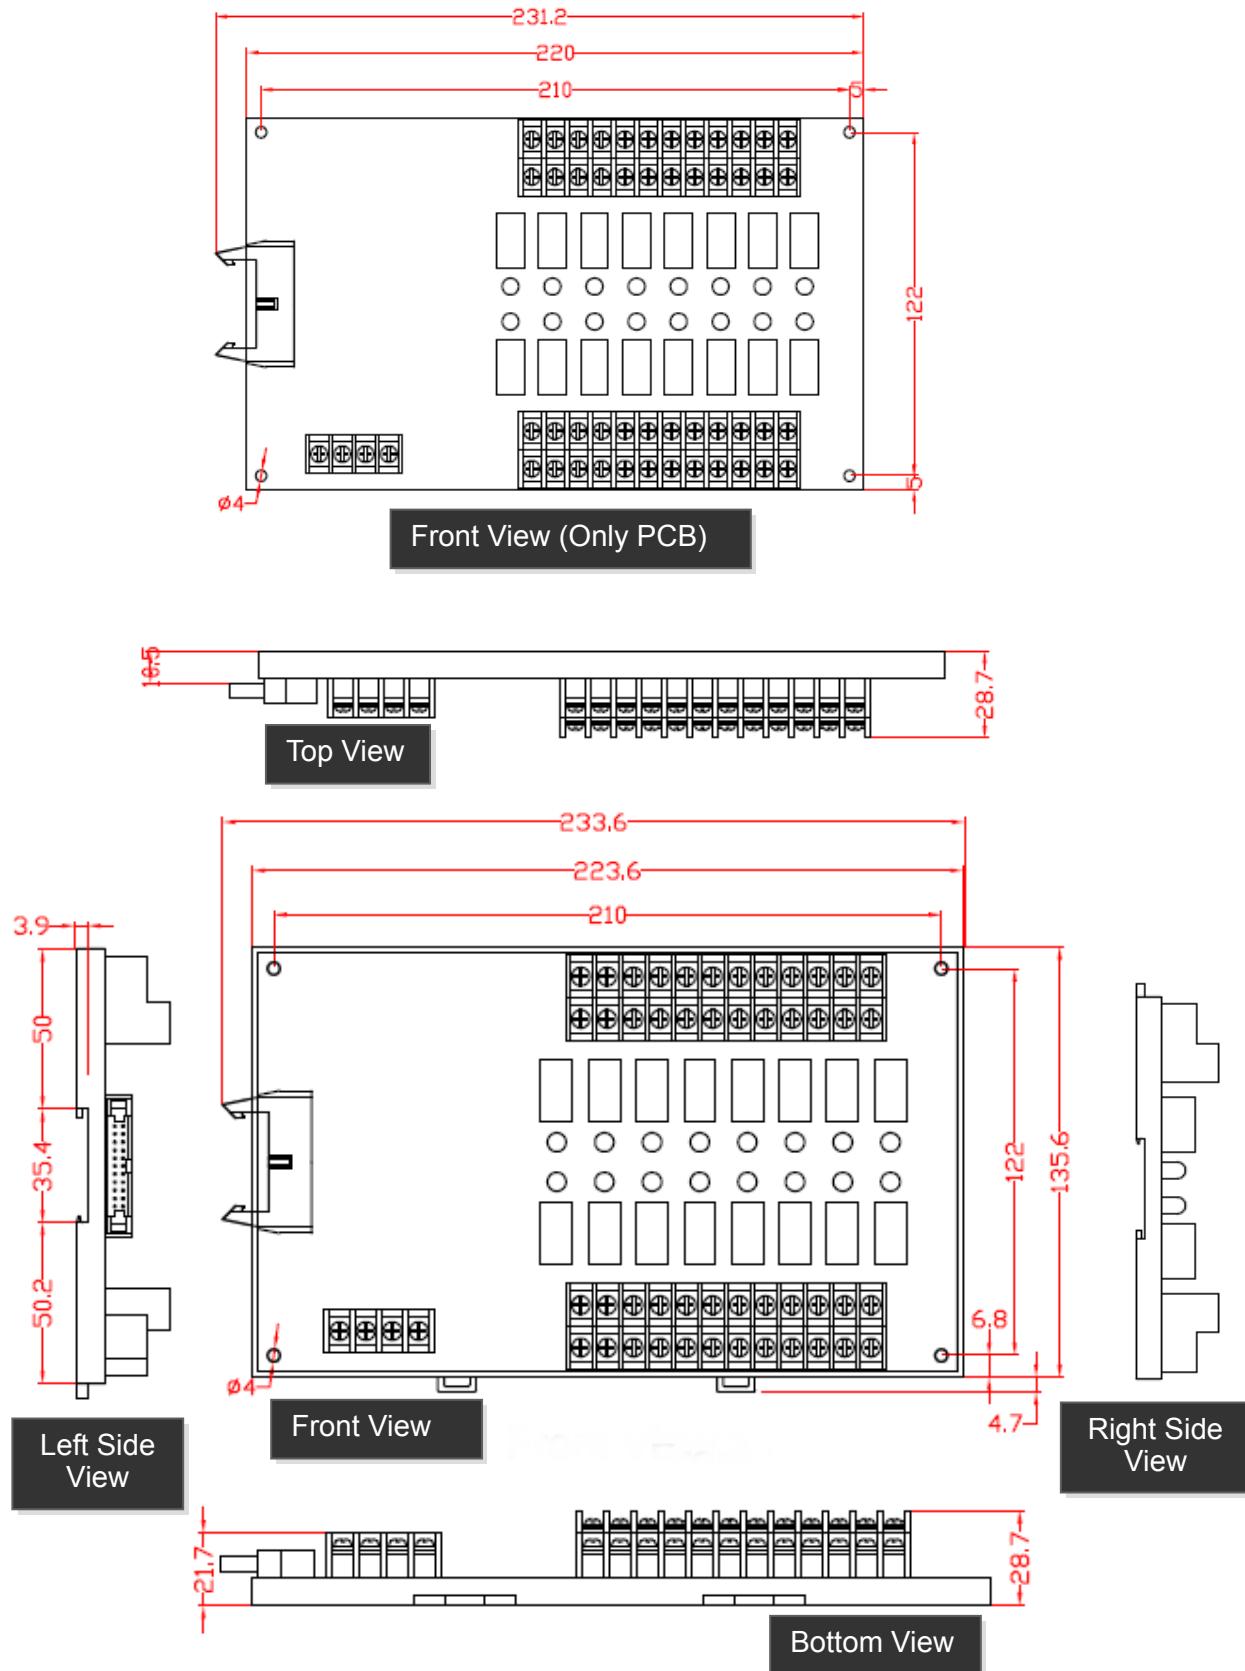

- CN3: Relay contact screw terminal blocks.

## 2.6. Dimensions (Unit: mm)

# DB-16P

*16-channel Opto-Isolated Digital Input Board*

## 3. Functional Description

The DB-16P is a 16 channel isolated digital input daughter board for A-82x DAS board or any 812PG, 711 series DAS boards. The optically isolated inputs of the DB-16P consist of a bi-directional LED with a resistor for current sensing. You can use the DB-16P to sense DC signal from TTL levels up to 24 V. You can also use DB-16P to sense a wide range of AC signals. The DB-16P registers a constant logic high if the frequency of the input AC signal is greater or equal to 1 kHz, and the voltage of the AC signal is at least 4 V<sub>rms</sub>. If you are using AC input signal, you should short the AC filter Jumper. You can use the board to isolate the computer from large common-mode voltages, ground loops, and voltage spikes that often occur in industrial environments.

### 3.1. Features

- 16-channel optically isolated digital input
- Connected to DIO-64, A-62x and A-82x data acquisition boards
- AC/DC signal input
- AC signal input with filter
- Input buffer with voltage comparators
- 3,000 V isolation
- Each channel has it's LED indicator

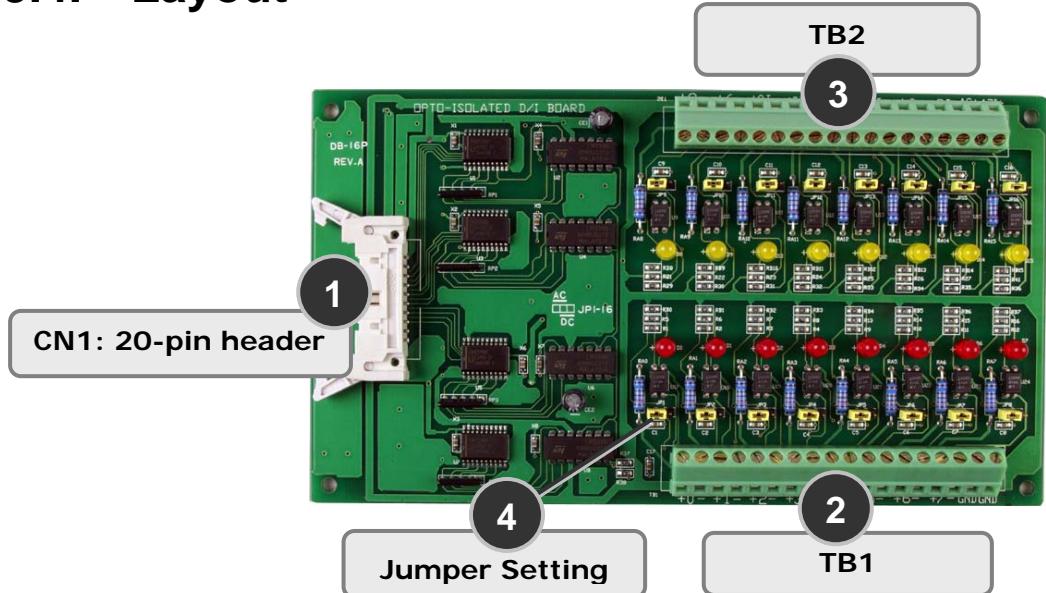

## 3.2. Specification

<b>Digital Input</b>		
Channels	16 (optically isolated)	
Compatibility	TTL compatible	
Input Voltage (Max.)	24 V <sub>DC</sub> or 24 V <sub>AC</sub>	
Input impedance	1.2 kΩ	
Input Current	5 V input	4 mA /channel
	24 V input	20 mA /channel
Input Response Time		20 μs without filter 2.2 ms with filter
<b>Digital Logic Level</b>		
Input Low Voltage (DC or peak AC)	Min.	0
	Max.	+/-1 V
Input High Voltage DC 1 kHz AC	Min.	+/- 3.8 V <sub>DC</sub> 4 V <sub>rms</sub>
	Max.	+/-24 V <sub>DC</sub> 24 V <sub>AC</sub>
<b>General</b>		
Dimensions (L x W)	205 mm x 114 mm	
<b>Environment</b>		
Operating Temperature	0 ~ +50°C	
Storage Temperature	0 ~ +60°C	
Humidity	5% ~ 90% RH, non condensing	
<b>Power Requirements</b>		
Power Consumption	224 mA/ +5 V (Max.) from PC	

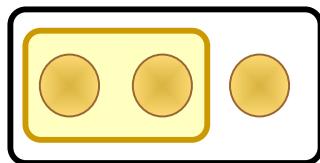

## 3.3. Applications

- Isolated digital input sensing
- Process monitoring

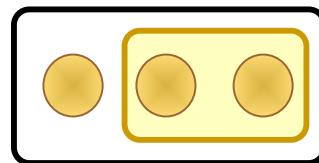

### 3.4. Layout

### 3.5. Jumper Setting

For AC signal with filter

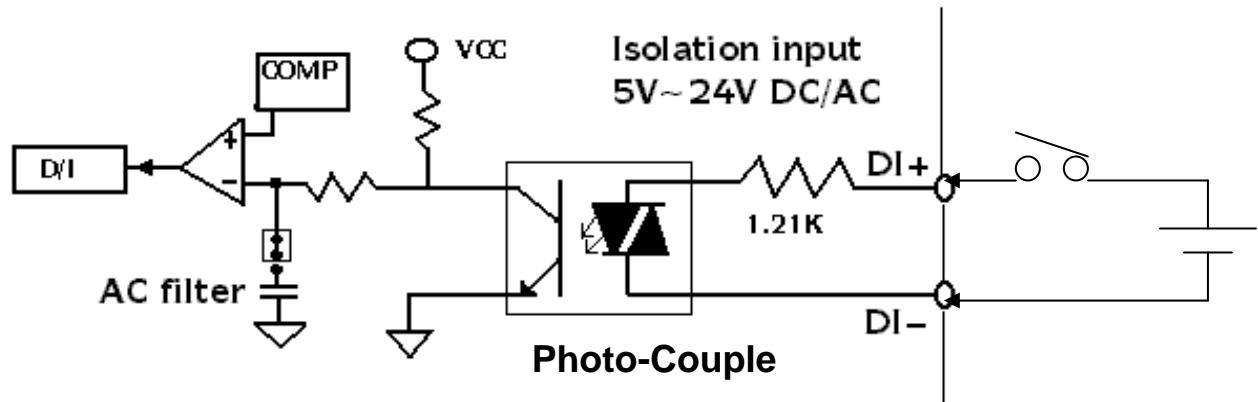

For DC signal without filter

If you are using AC signal, you must short the AC FILTER jumper.

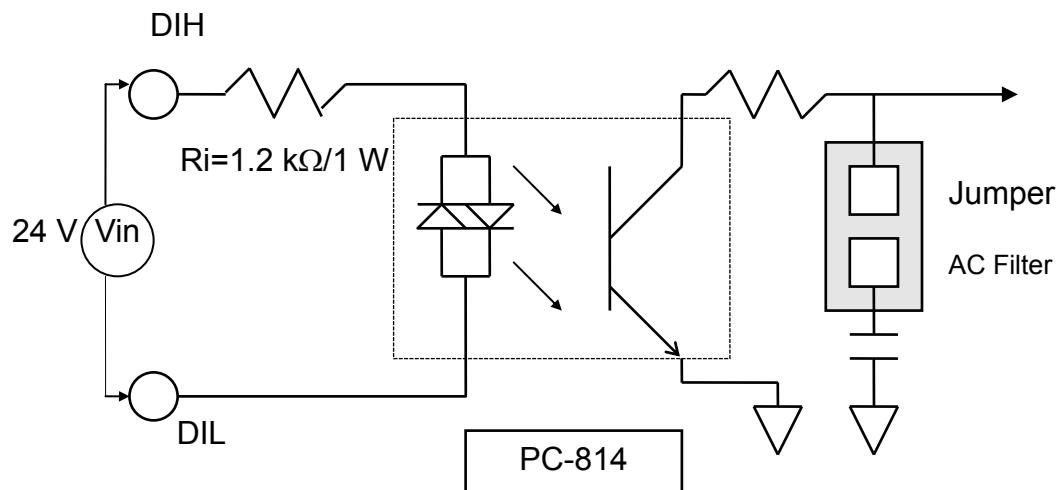

If you are using DC input signals, the AC FILTER is optional. If the response time of input signals less than 20  $\mu$ s, set the filter off. If you want a slow response (about 5 ~ 10 ms) for rejecting noise or contact bouncing, short the AC FILTER jumper.

### 3.6. Isolated Input

The normal input voltage range is 5 ~ 24 V<sub>AC</sub> or V<sub>DC</sub>.

The normal input range can be changed by choosing suitable resistor to limit the current through the Photo-isolator to about 10 mA(I<sub>f</sub>). The default resistor is 1.2 kΩ/1 W.

$$R_i = V_{in}/I_f$$

$$P_w = V_{in} \times I_f$$

Calculation Example:

If V<sub>in</sub> = 120 V then R<sub>i</sub>=120(V) / 0.01(A)=12 kΩ

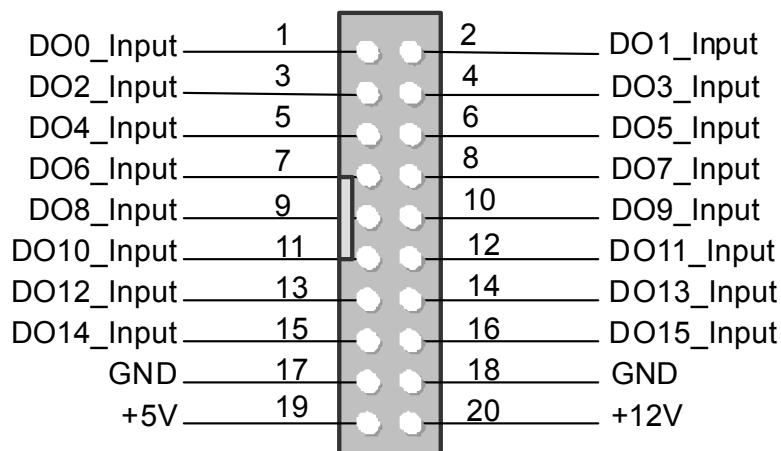

$$P_w=120(V) \times 0.01(A) = 1.2 W$$

The R<sub>i</sub> must be replaced by 12 kΩ/2 W(1.2 W)

### 3.7. Pin Assignment

#### ■ CN1 pin assignment.

# DB-16P8R

*16-channel Input Terminal and 8-channel Relay Output*

## 4. Functional Description

The DB-16P8R is a 16-channel isolated/non-isolated input & 8-channel relay output board. The isolated digital input can be used to sense  $3.5\text{ V}_{\text{DC}} \sim 24\text{ V}_{\text{DC}}$  signal. The non-isolated digital inputs are used to sense dry contact. The relay output consists of 16 form C power relays. The user can use this board to isolate the computer from large common-mode voltage, ground loops and transient voltage spike that often occur in industrial environments.

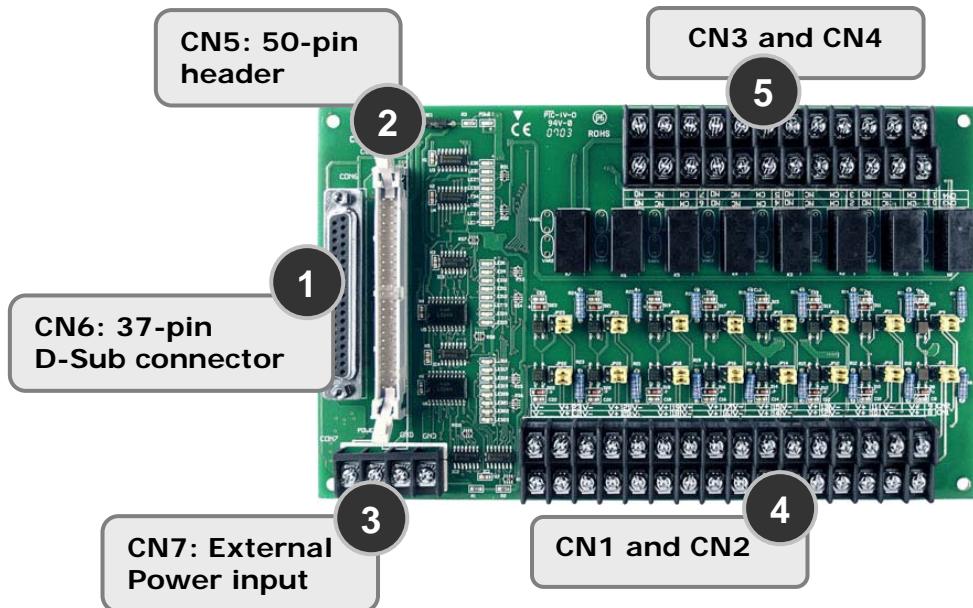

### 4.1. Features

- 16-channels optically isolated digital input
- 8-channels relay output
- Connects directly to DIO-24, DIO-48, DIO-144, PIO-D144, PIO-D96 and PIO-D48 OPTO-22 compatible digital input card or any 722, 724 OPTO-22 compatible digital input board.
- Isolation digital input
- Dry contact or wet contact by jumper select input range: High  $5\text{~}24\text{ V}_{\text{DC}}$ / Low  $0\text{~}1.8\text{ V}_{\text{DC}}$
- Input resistor: 1.2 KOhm/1 W input buffer with voltage comparators
- Relay output 8-channel relay output max. Load  $30\text{ V}_{\text{DC}}/220\text{ V}_{\text{AC}}$  @ 5 A

## 4.2. Specification

<b>Digital Input</b>		
Channels	16	
Isolated voltage	3750 V	
Input voltage	3.5 V ~ 24 V	
Dry Contact	Logic high	Input close
Input	Logic low	Input open
<b>Relay Output</b>		
Channels	8	
Contact Arrangement	SPDT (1 Form C)	
Nominal Load	250 V <sub>AC</sub> /5 A	
Max. Switching Power	1,250 VA(NO), 750 VA(NC)	
Max. Switching Voltage	250 V <sub>AC</sub> , 150 V <sub>Dc</sub>	
Max. Switching Current	5 A	
Time Value	Operate	10 ms
	Release	5 ms
Mechanical Life	10 millions operations	
<b>General</b>		
Dimensions	213 mm x 132 mm	
<b>Environment</b>		
Operating Temperature	0 ~ +60°C	
Storage Temperature	-20 ~ +70°C	
Humidity	5% ~ 95% RH, non condensing	
<b>Power Requirements</b>		
Power Consumption	0.3 A @ 24 V	
	0.1 A @ 5 V	
<b>Power Reply</b>		
Power Consumption	Min.	2.5 μA (All relays off)
	Max.	0.5 A (All relays on)
	Relay On	22 mA (for single relay)

# DB-24R/DB-24RD

*24-channel Relay Output Board*

## 5. Functional Description

The DB-24R / DB-24RD, 24-channel Relay Output Board, consists of 24 form c relays for efficient switch of load by programmed control. The DB-24R can be connected to DIO-24, DIO-48, DIO-D96, DIO-144, PIO-D144, PIO-D96 and PIO-D48 and any other OPTO-22 compatible Digital I/O board the relays are energized by apply 5 volt signal to the appropriate relay channel on the 50-pin header or 37-pin D-sub connector (DB-24RD). Twenty-four enunciator LEDs, one for each relay, light when their associated relay is activated. This board provides a screw terminal for external power supply.

### 5.1. Features

#### DB-24R:

- 24 Form C Relays
- Contact rate up to 0.5 A/120 V<sub>AC</sub>, 1 A/30 V<sub>DC</sub>
- Accept 50-pin OPTO-22 compatible header, For DIO-24, DIO-48, DIO-144 and PIO-series digital output port or any OPTO-22 compatible digital
- LED indicates relay status
- Screw terminals for filed wiring

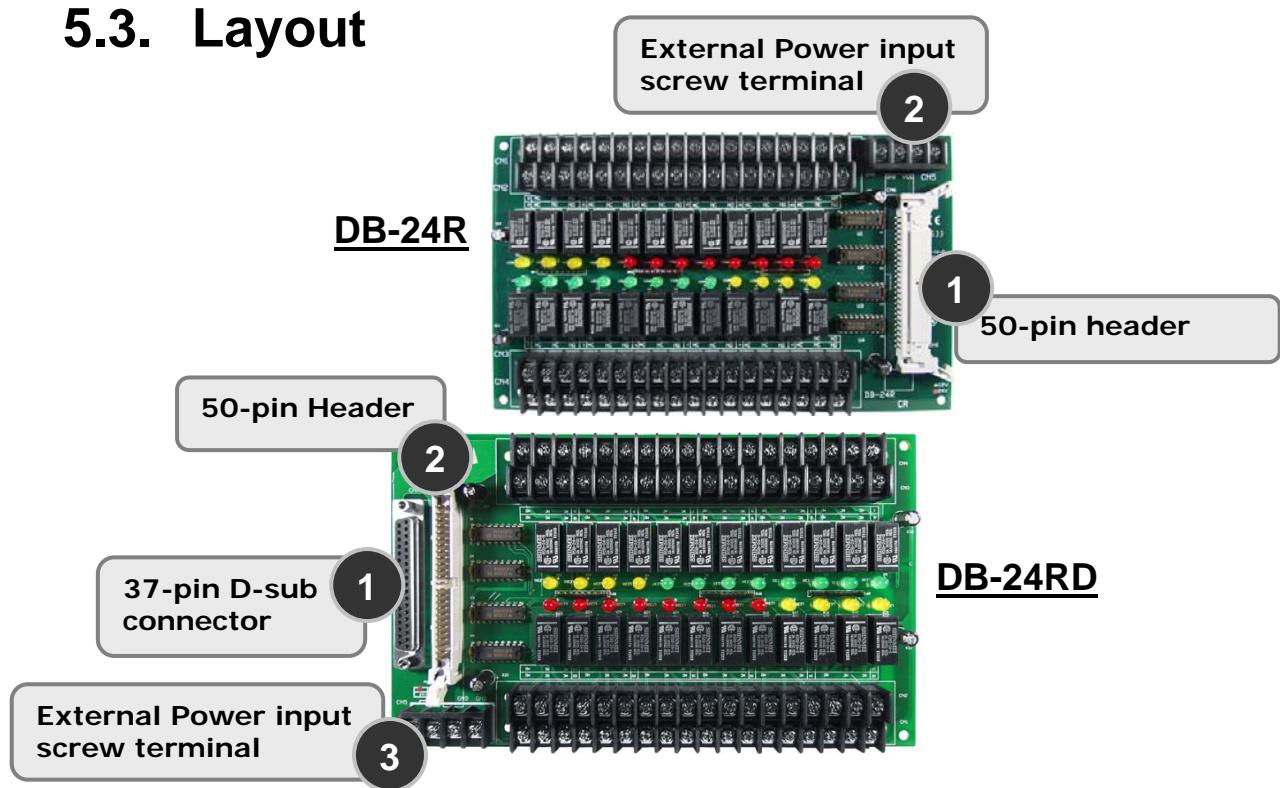

#### DB-24RD

- Accept 50-pin OPTO-22 compatible header, For DIO-24, DIO-48, DIO-144 and PIO-series digital output port or any OPTO-22 compatible digital output port
- The 37-pin D-sub connector can be directly connected to PIO-D144, PIO-D96, PIO-D48, PIO-D56 and PIO-D24.
- 24 Form C Relays
- Contact rate up to 0.5 A/120 VAC, 1 A/30 VDC
- LEDs indicate relay status
- Screw terminals for filed wiring

## 5.2. Specification

Relay Output		
Channels		24
Type		Form C
Nominal Load		0.5 A/120 V <sub>AC</sub> 1 A/24 V <sub>DC</sub>
Max. Switching Power		60 VA, 24 W
Max. Switching Voltage		120 V <sub>AC</sub> , 60 V <sub>DC</sub>
Max. Switching Current		1 A
Life Expectancy		Electrical (20 Millions Times)
Time Value	Operate	6 ms
	Release	3 ms
Control Logic		Input TTL high (+5 V), relay on
General		
Dimensions		220 mm x 132 mm
Environment		
Operating Temperature		0 ~ +60°C
Storage Temperature		-20 ~ +70°C
Humidity		5% ~ 95% RH, non condensing
Power Requirements		
Power Consumption		0.53 A @ 12 V 0.2 A @ 5 V

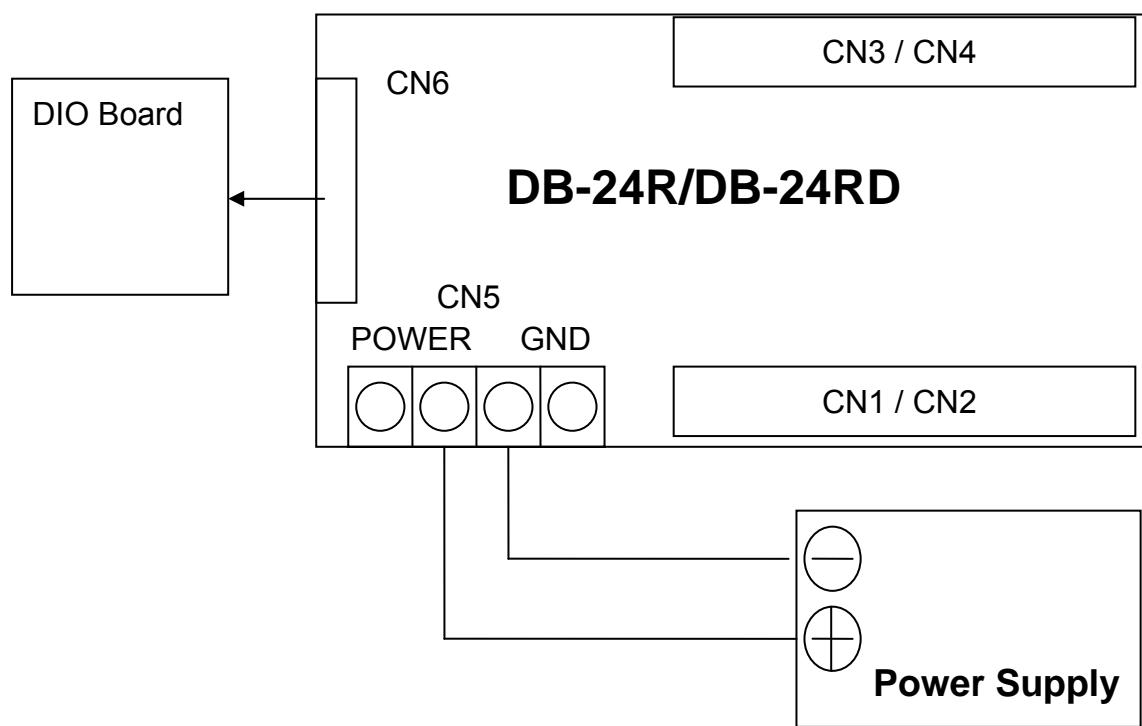

## 5.3. Layout

**DB-24R and DB-24RD support external power supply only.**

DB-24R/12 V and DB-24RD/12 V for DC 12 V external power supply

DB-24R/12 V and DB-24RD/24 V for DC 24 V external power supply

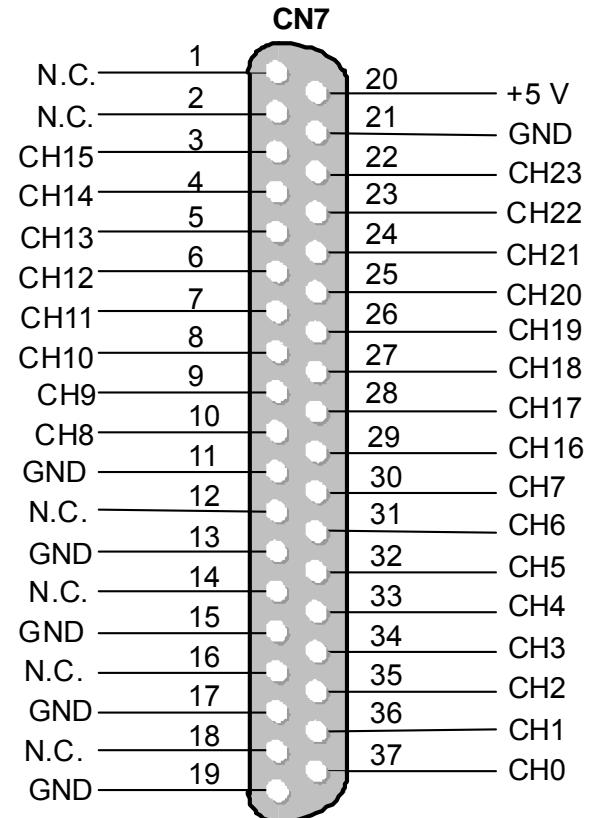

## 5.4. Pin Assignment

## 5.5. DB-24RD Dimensions

# DB-24PR/DB-24PRD

*24-channel Power Relay Output Board*

## 6. Functional Description

The DB-24PR / DB-24PRD, 24 channel power relay output board, consists of 8 Form C and 16 Form A electromechanical relays for efficient switching of load by programmed control. The contact of each relay can control a 5 A load at 250 V<sub>AC</sub>/ 30 V<sub>DC</sub>. The relay are energized by applying 5 voltage signal to the appropriated relay channel on the 20-pin header (DB-24PR only), 50 pin header and 37-pin D-sub connector (DB-24PRD only). Twenty-four enunciator LEDs, one for each relay, light when their associated relay is activated. To avoid overloading your PC's power supply, this board provides a screw terminal for power supply. CN1, CN2, CN3 and CN4 are terminal blocks to connect with wiring. The CN7 is used to connect with DIO-24, DIO-48, DIO-144 or any OPTO-22 compatible digital output port. The CN6 is used to connect with A-82XPG series PCI-1800 series ISO-DA series, DIO-64 or any compatible digital output port. The DB-24PRD has one 37-pin D-sub connector. The 37-pin D-sub connector can be directly connected to PIO-D144, PIO-D96, PIO-D48 and PIO-D24's 37-pin D-sub connector.

### 6.1. Features

#### DB-24PR:

- 16 Form A Relays, 8 Form C Relays
- DB-24PR accepts two kind connectors:
  - Accept 20-pin header to control 8 Form C (channel 0~7) relays and 8 Form A relays (channel 8~15).
  - Accepts 50-pin header to control 8 Form C relays and 16 Form A relays.
- Each varistor protect one contact.
- LED indicates relay status.

## **DB-24PRD**

- DB-24PRD: Accept two kind connectors:
  - 37-pin D-sub connector: For PIO-D144, PIO-D96, PIO-D48, PIO-D56 and PIO-D24 digital I/O boards
  - 50-pin header: For DIO-144, DIO-96, DIO-48 and DIO-24 digital I/O boards. Other features are same as DB-24PR.

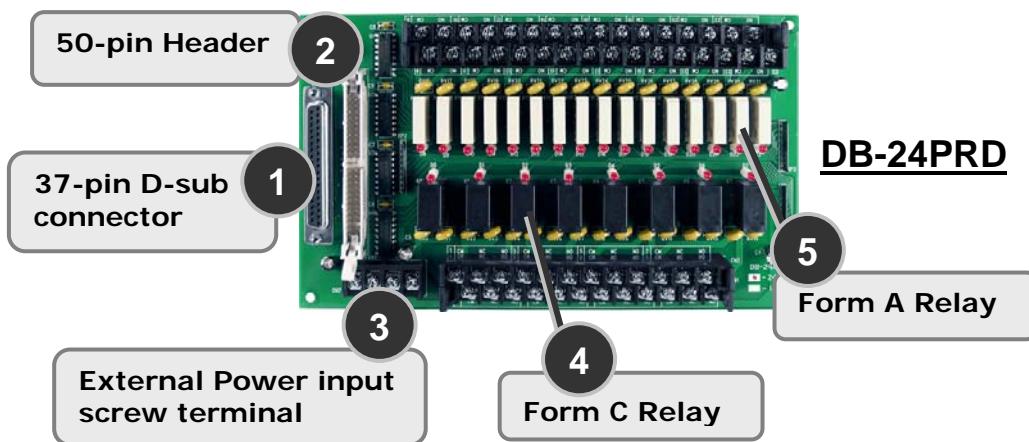

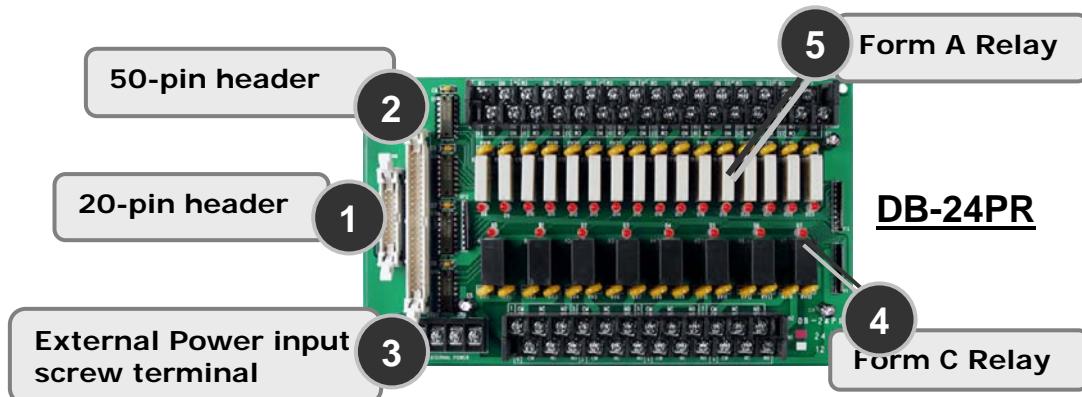

## **6.2. Specification**

<b>Relay Output</b>		
Channels	16	8
Type	1 Form A (SPST-NO)	1 Form C (SPDT)
Nominal Load	5 A 250 V <sub>AC</sub> or 30 V <sub>DC</sub>	250 V <sub>AC</sub> / 5 A

# DB-24C

*24-channel Open-Collector Output Board*

## 7. Functional Description

The DB-24C has 24 channels of optically isolated digital outputs, arranged into four isolated banks. Each digital output offers a darlington transistor and integral suppression diode for inductive load. The board interface to field logic signals, eliminating ground-loop problems and isolating the host computer from damaging voltages. The DB-24C has one 37-pin D-sub connector, one 50-pin OPTO-22 compatible male header and one 20-pin male header.

The transistor is energized by applying a 5-voltage signal to the appropriate input channels on the 50-pin header or 20-pin header or 37-pin D-sub connector. Twenty-four enunciator LEDs, one for each transistor, light when their associated transistor is activated. Because there is a 37-pin D-sub connector on the board, the user may use it to interface to any TTL output board. In other words, the user may use it as a general purpose open-collector output board.

### 7.1. Features

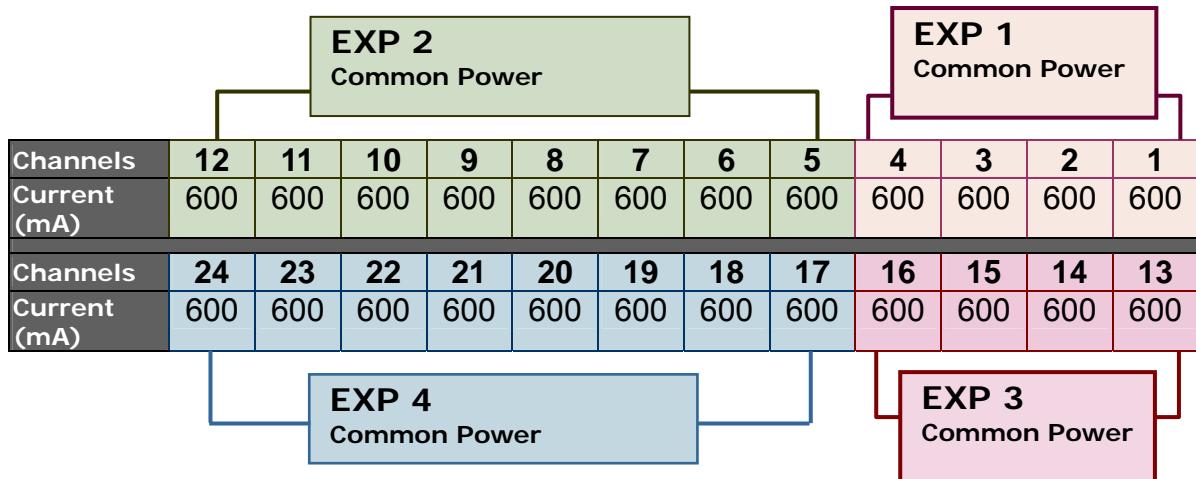

- Group A (high nibble), Group B (low nibble), C (byte) and Group D has 24-channel open-collector output each. The maximum load is 600 mA per channels.
- Accept 20-pin connector to control 16 high current output channels.
- LEDs indicate each channel and power status.
- Overload protection
- 3750 V optical isolation
- 5 V<sub>DC</sub> logic levels

### 7.2. Applications

- LEDs indicate the status of transistor
- Screw terminals for easy field wiring
- OPTO-22 Compatible connector
- D-sub connector 37-pin connector connects directly to PIO-D144, PIO-D96 and PIO-D24 board or another OPTO-22 board with ADP-37 adapter

# DB-24OD

*24-channel Open Drain Output Board*

## 8. Functional Description

The DB-24OD has 24-channel optically isolated digital output. The board is the interface for field logic signals, eliminating ground-loop problems and isolating the host computer from damaging voltages. The DB-24OD has a single 37-pin D-sub connector, one 50-pin OPTO-22 compatible male header and a 20-pin male header. The transistor is powered by applying a 5-volt signal to the appropriate input channel on the 50-pin header, the 20-pin header or the 37-pin D-sub connector. Twenty-four indicator LEDs, one for each transistor, are lit when their associated transistor is activated. The board may be used to interface with any TTL output board, allowing it to be used as a general purpose open-drain output board.

### 8.1. Features

- 24-channel high current open-drain output.
- Connects directly to OPTO-22 compatible board or any 722,724 series board
- 24-channel max. load 400 mA (per channel)
- LEDs indicate each channel and power status
- 3750 V optical isolation
- 5 V<sub>DC</sub> logic levels

### 8.2. Application

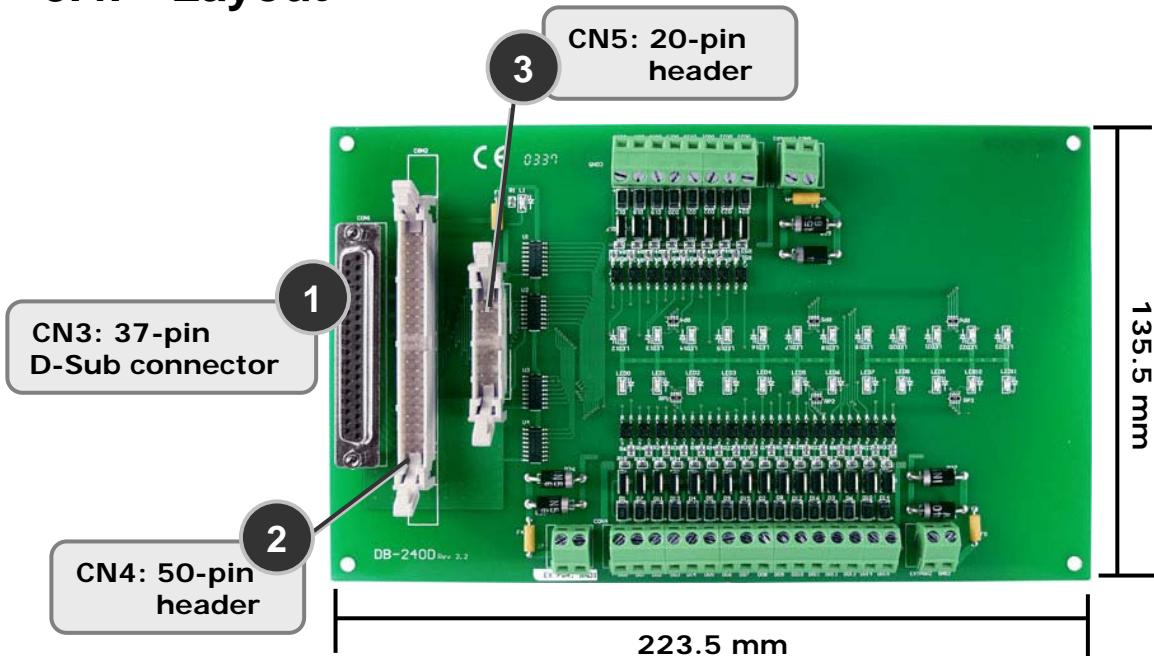

- ON/OFF Control
- Energy Management
- Test Automation
- Process Control

# DB-24POR

*24-channel Photo Output Board*

## 9. Functional Description

The DB-24POR includes 24 normally open, form A, Photo-MOS relays. The board interface to field logic signals, eliminating ground-loop problems and isolating the host computer from damaging voltages. The user can use the DB-24POR to switch load, up to 350 V<sub>AC</sub> and up to 130 mA. The relay is energized by applying a 5 voltage signal to the appropriate relay channel on the 50-pin OPTO-22 compatible connector or 37-pin D-sub connector. Twenty-four indicators LEDs, one for each relay, light when their associated relay is activated. Because there is a D-sub 37-pin connector on the board, the user may use it to interface to any TTL output board. In other words, the user may use it as a general-purpose photo-MOS relay output board.

### 9.1. Features

- 24-channel Optically isolated digital output
- 24 Form A PhotoMos relays
- Switch up to max. 0.13 A at max. 350 V<sub>AC</sub>
- LEDs indicate relay status
- 5000 V optical isolation
- 5 V<sub>DC</sub> logic levels
- Built-in fuses and diodes to protect from wrong connecting of external power supply.
- 50-pin header connector directly to DIO-24, DIO-48, DIO-144, PIO-D144, PIO-D96, PIO-D56, PIO-D48, PIO-D24 and other OPTO-22 compatible digital output boards.
- D-sub 37-pin connector connects directly to PIO-d144, PIO-D96, PIO-D56, PIO-D48 and PIO-D24 digital output boards.

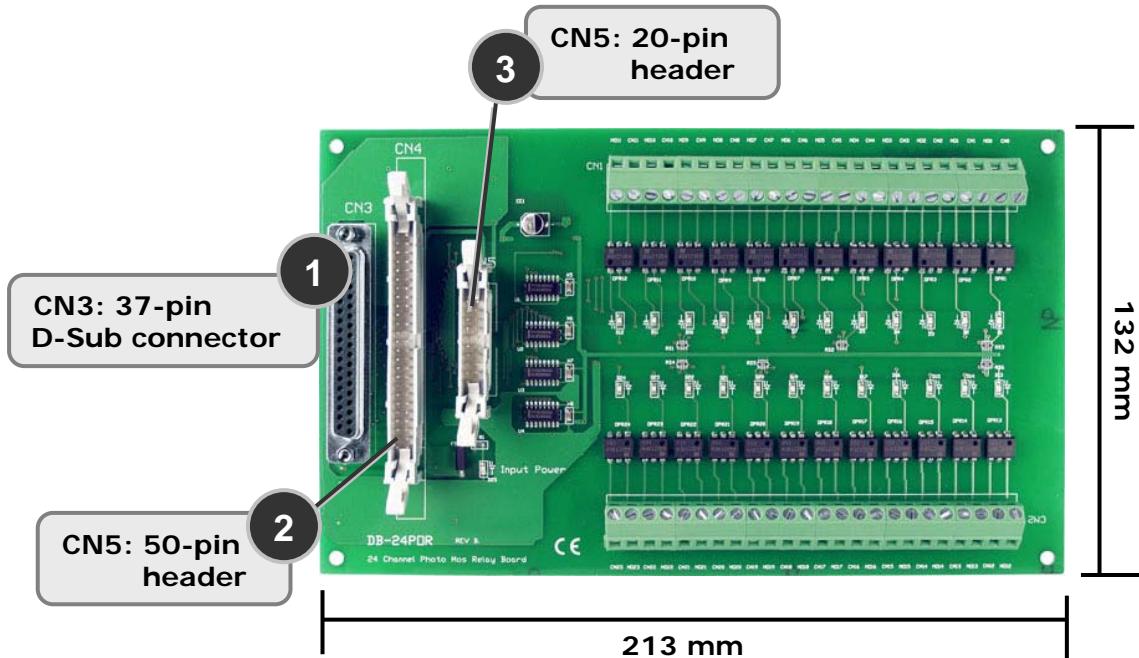

## 9.2. Applications

- ON/OFF Control
- Energy management
- IC factory Automation
- Test Automation

# DB-24SSR/DB-24SSRDC

*24-channel Solid State Relay Board*

## 10. Functional Description

The DB-24SSR/DB-24SSRDC includes 24 normally open, or Form A, solid-state relays. The board interface to field logic signals, eliminating ground-loop problems and isolating the host computer from damaging voltages. The user can use the DB-24SSR/DB-24SSRDC to switch high voltage load, up to 240 V<sub>AC</sub>/50 V<sub>DC</sub> and up to 4 A. The relay is energized by applying a 5-voltage signal to the appropriate relay channel on the 50-pin header or 37-pin D-sub connector. Twenty-four enunciator LEDs, one for each relay, light when their associated relay is activated. Because there is a D-sub 37-pin connector on the board, the user may use it to interface to any TTL output board. In other words, the user may use it as a general purpose solid state relay output board.

### 10.1. Features

- 24-channel optically isolated digital output
- 24 Form A solid-state relays
- Switch up to 4 A 250 V<sub>AC</sub>/50 V<sub>DC</sub>
- Screw terminal for easy field wiring
- 2500 V<sub>AC</sub> optical isolation
- 5 V<sub>DC</sub> logic levels
- Can choose plug-in screw-terminal, modification and ensuring simple installation, modification and maintenance.
- 50-pin header connects directly to DIO-24, DIO-48, DIO-144, PIO-D144, PIO-D96, PIO-D48, and PIO-D24 OPTO-22 compatible board.
- D-Sub 37-pin connector connects directly to PIO-D144, PIO-D96, PIO-D48 and PIO-D24 board or another OPTO-22 board with ADP-37 adapter
- Built-in varistor for DB-24SSR only

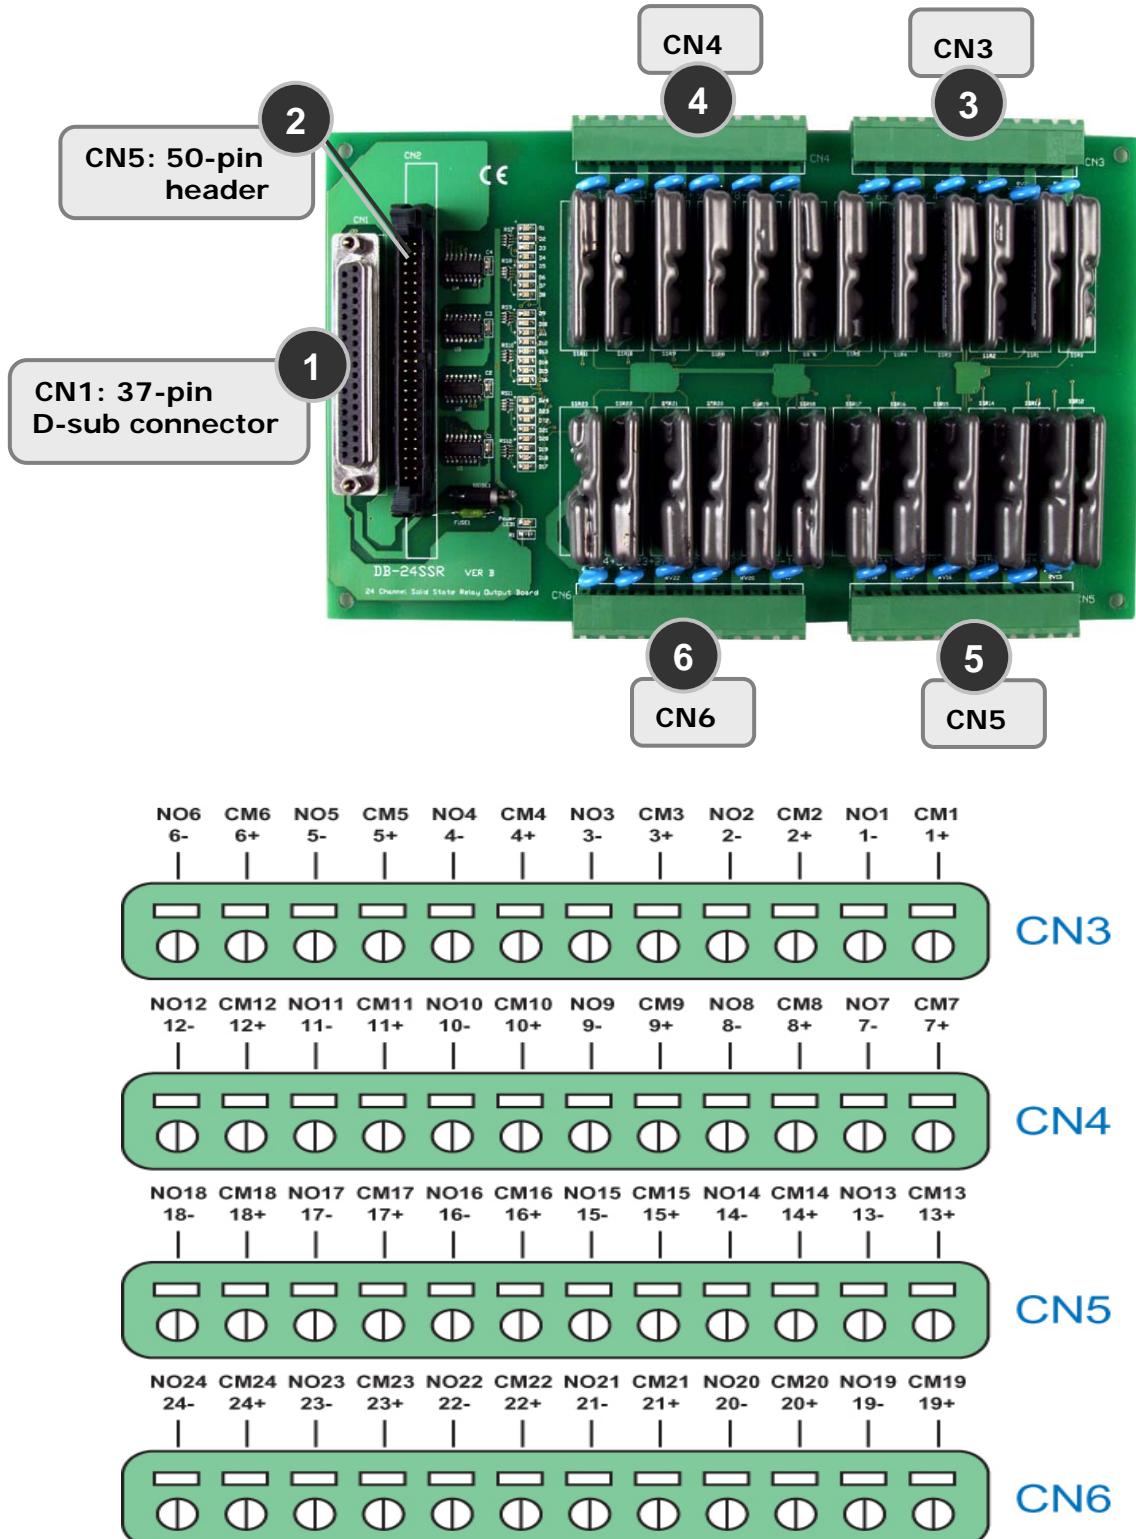

## 10.2. Applications

- ON/OFF Control
- Energy management
- Test Automation
- Process Control

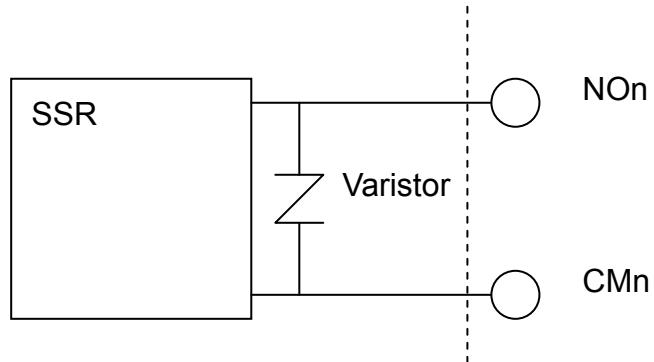

## 10.3. Specification

Model Name	DB-24SSR	DB-24SSRDC
<b>Relay Output</b>		
Channels	24	
Solid State Relay	AC	DC
Load Voltage	50 ~ 250 V <sub>AC</sub>	3 ~ 50 V <sub>DC</sub>
Max. Load Current	4 A	
Repetitive Peak OFF Voltage	600 V	1 mA
Max. "ON-state" Voltage Drop	1.5 V	1.2 V
Surge Current	50 A	10 A
Max. "OFF-state" Leakage Current	5 mA	1 μA
Min. Load Current	20 mA	1 mA
Breakdown Voltage	2500 V (Between input & output)	
Insulation resistance. i.	100,000,000 Ω (min.)	
Operate time, 1/2 cycle of voltage sine wave	1 ms (max.)	0.5 ms (max.)
Zero Crossing	Yes	
Snubber Circuit	Yes	
<b>General</b>		
Dimensions	220 mm x 130 mm x 32 mm	
<b>Environment</b>		
Operating Temperature	0 ~ +60°C	
Storage Temperature	-20 ~ +70°C	
Humidity	5% ~ 95% RH, non condensing	
<b>Power Requirements</b>		
Power Consumption	0.4 A @ +5 V <sub>DC</sub> max.	
Input Current	0.025 A (Max.)	

## 10.4. Layout

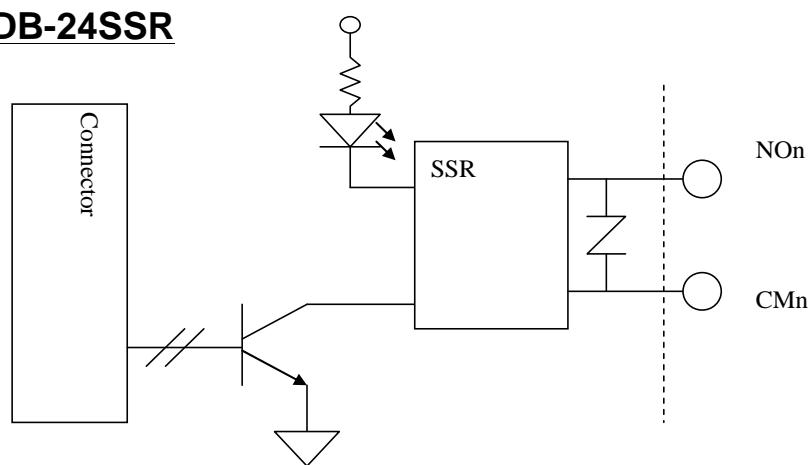

Channel 0~23	NOn	CMn

# DB-24P/DB-24PD

*24-channel Photo-Isolated Digital Input Board*

## 11. Functional Description

The general specification of DB-24P is the same as DB-16P. But DB-24P has one Opto-22 compatible 50-pin connector and can be used for 24 channel photo-isolated digital input.

The DB-24PD is almost the same as DB-24P. But DB-24PD has one 37-pin D-sub connector.

### 11.1. Features

- 24 optically isolated digital input
- Connect to DIO-24, DIO-48, DIO-144 or any OPTO-22 compatible connector of digital input/output board.
- DB-24PD connect to PIO-D144, PIO-D96, PIO-D48 and PIO-D24
- AC/DC signal input
- AC signal input with filter
- Input buffer with voltage comparators
- 1000 V isolation
- Each channel has it's LED indicator

### 11.2. Applications

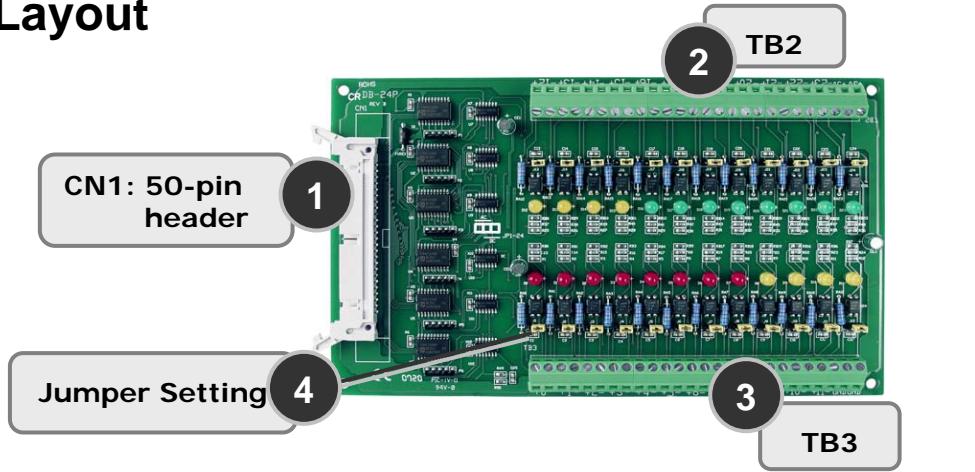

- 24 optically isolated digital input
- Connect to DIO-24, DIO-48, DIO-144 or any OPTO-22 compatible connector of digital input/output board.

## 11.3. Specification

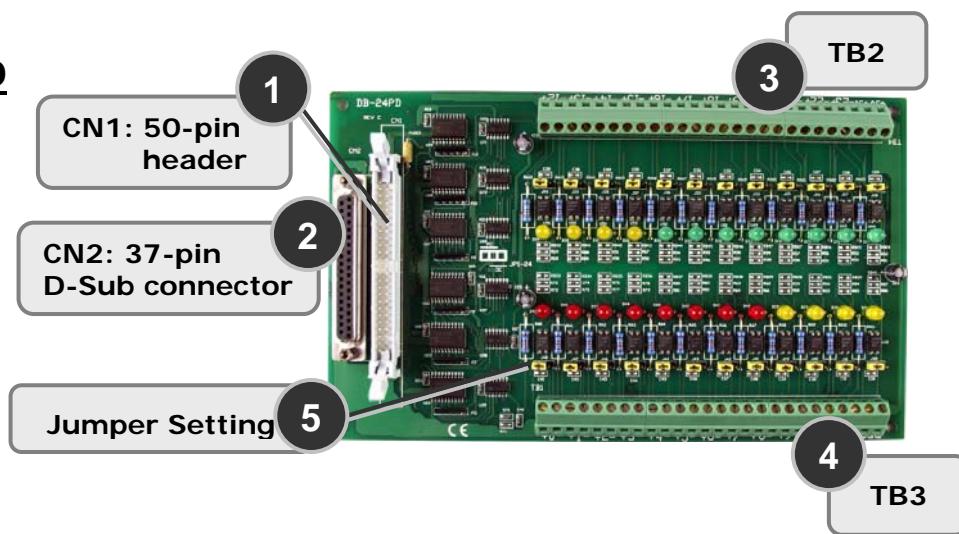

<b>Digital Input</b>		
Channels		24
Compatibility		TTL Compatible
Type		Optically Isolated
Max. Input Voltage		24 V <sub>DC</sub> or 24 V <sub>AC</sub>
Input Low Voltage (DC or peak AC)	Min.	0
	Max.	+/- 1 V
Input High Voltage DC 1 kHz AC	Min.	+/- 3.8 V <sub>DC</sub> 4 Vrms
	Max.	+/-24 V <sub>DC</sub> 24 V <sub>AC</sub>
Impedance		1.2 K
Current	5 V input	4 mA/channel
	24 V input	20 mA/channel
Response Time		20 µs without filter 2.2 ms with filter
<b>General</b>		
Dimensions		213 mm x 132 mm
<b>Environment</b>		
Operating Temperature		0 ~ +50°C
Storage Temperature		0 ~ +60°C
Humidity		5% ~ 95% RH, non condensing
<b>Power Requirements</b>		
Power Consumption		290 mA/ +5 V (Max.) for DB-24P

## 11.4. Layout

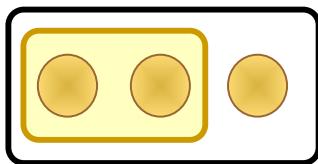

### DB-24P

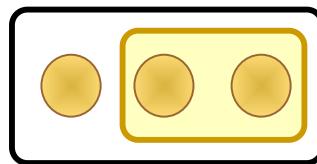

### DB-24PD

## 11.5. Jumper Setting

For AC signal with filter

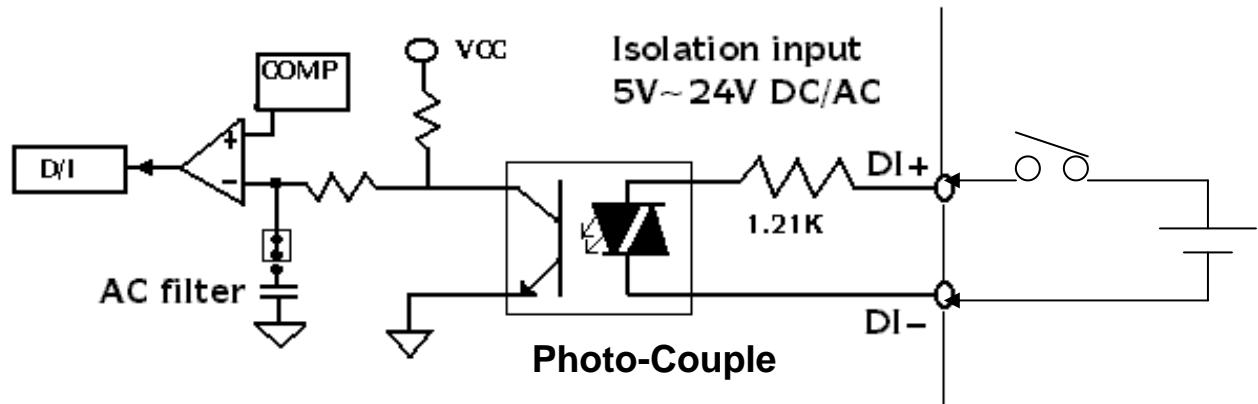

For DC signal without filter

If you are using AC signal, you must short the AC FILTER jumper.

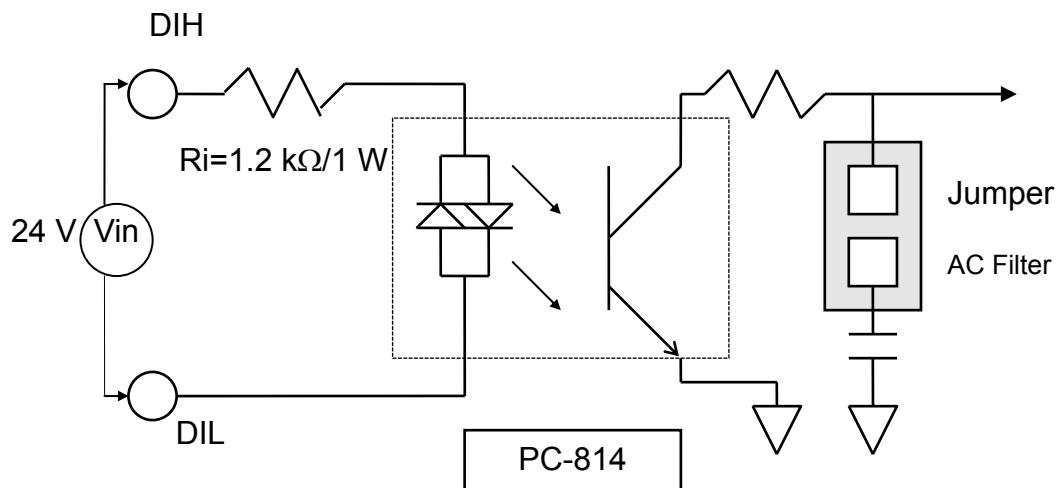

If you are using DC input signals, the AC FILTER is optional. If the response time of input signals less than 20  $\mu$ s, set the filter off. If you want a slow response (about 5 ~ 10 ms) for rejecting noise or contact bouncing, short the AC FILTER jumper.

## 11.6. Isolated Input

The normal input voltage range is 5 ~ 24 V<sub>AC</sub> or V<sub>DC</sub>.

The normal input range can be changed by choosing suitable resistor to limit the current through the Photo-isolator to about 10 mA(I<sub>f</sub>). The default resistor is 1.2 kΩ/1 W.

$$R_i = V_{in}/I_f$$

$$P_w = V_{in} \times I_f$$

Calculation Example:

If V<sub>in</sub> = 120 V then R<sub>i</sub>=120(V)/0.01(A)=12 kΩ

$$P_w=120(V) \times 0.01(A) = 1.2 W$$

The R<sub>i</sub> must be replaced by 12 kΩ/2 W(1.2 W)

## **11.7. Pin Assignment**

# 12. Configuration

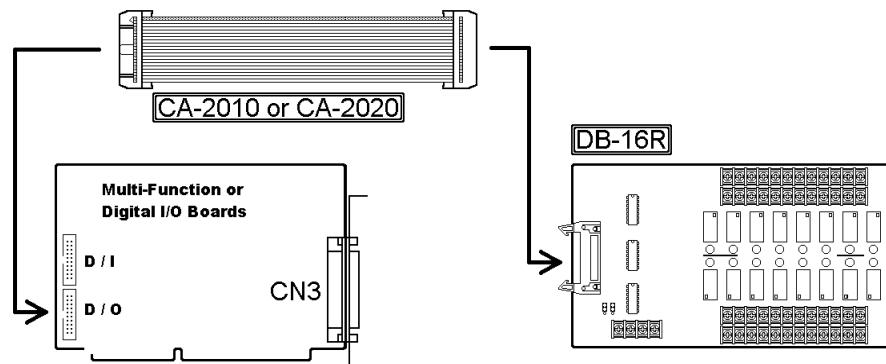

## 12.1. Connect to DIO Board

- DB-16P/DB-16R connect to 20-pin digital input/output connector

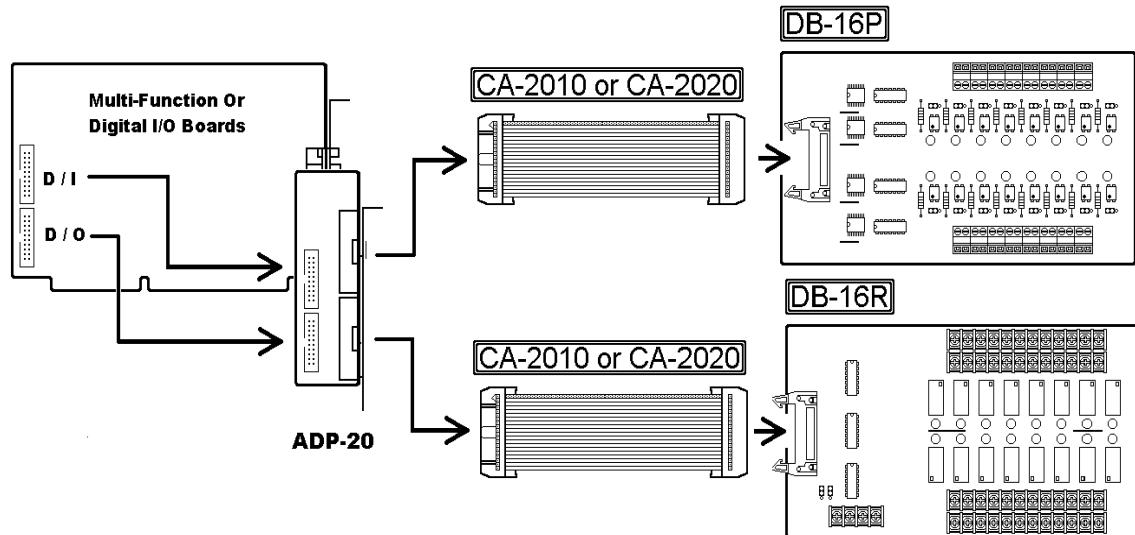

**DB-16P linked to digital input port of multi-function board**

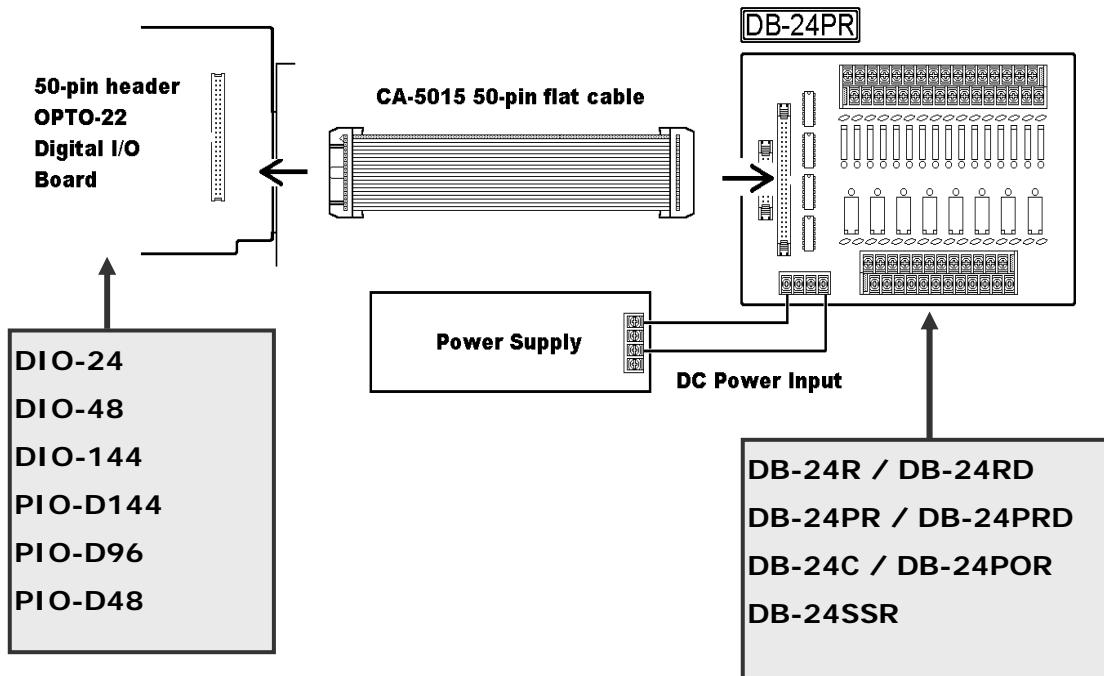

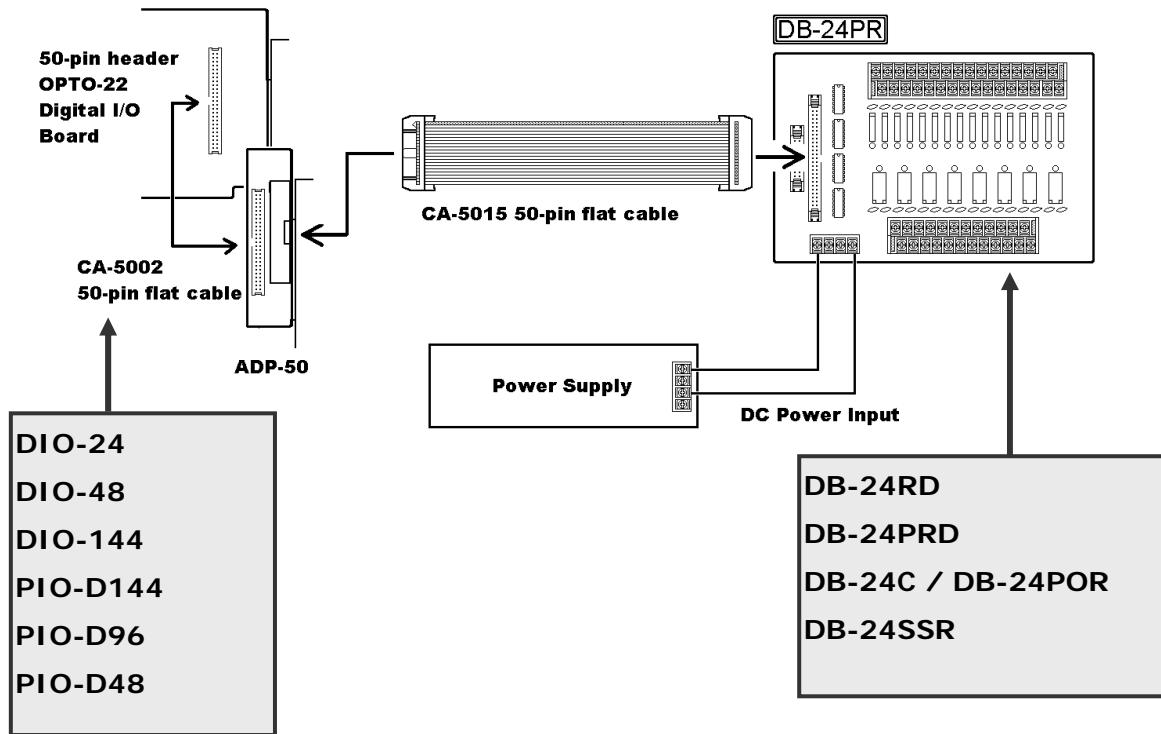

**DB-16R linked to digital output port of multi-function board**

- The DB-16P/DB-16R linked to Multi-Function board via ADP-20 extender.

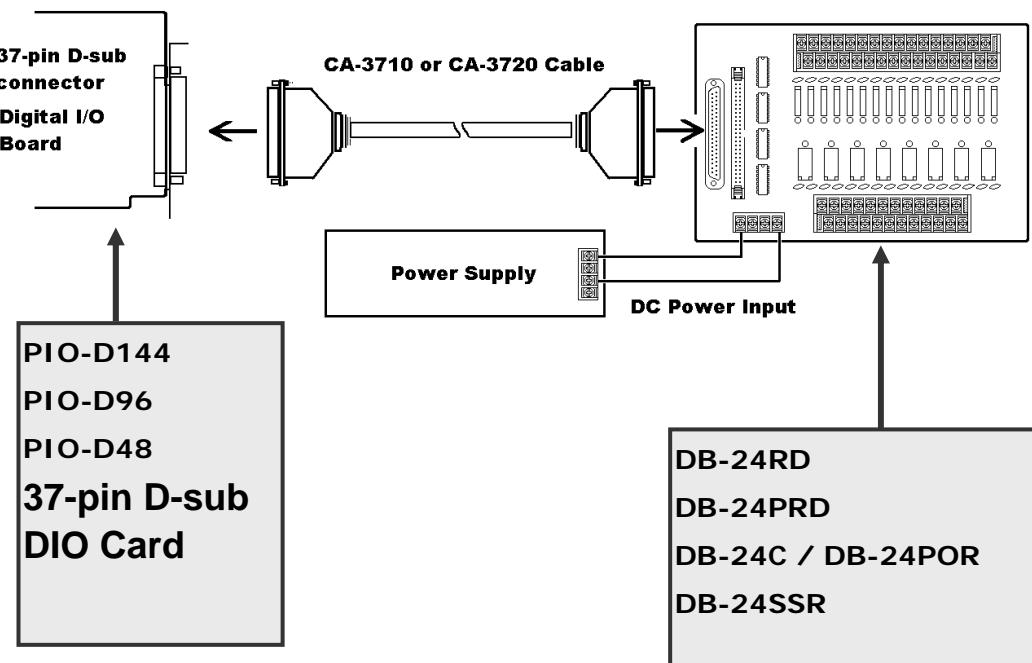

- 50-pin OPTO-22 compatible connector directly connected

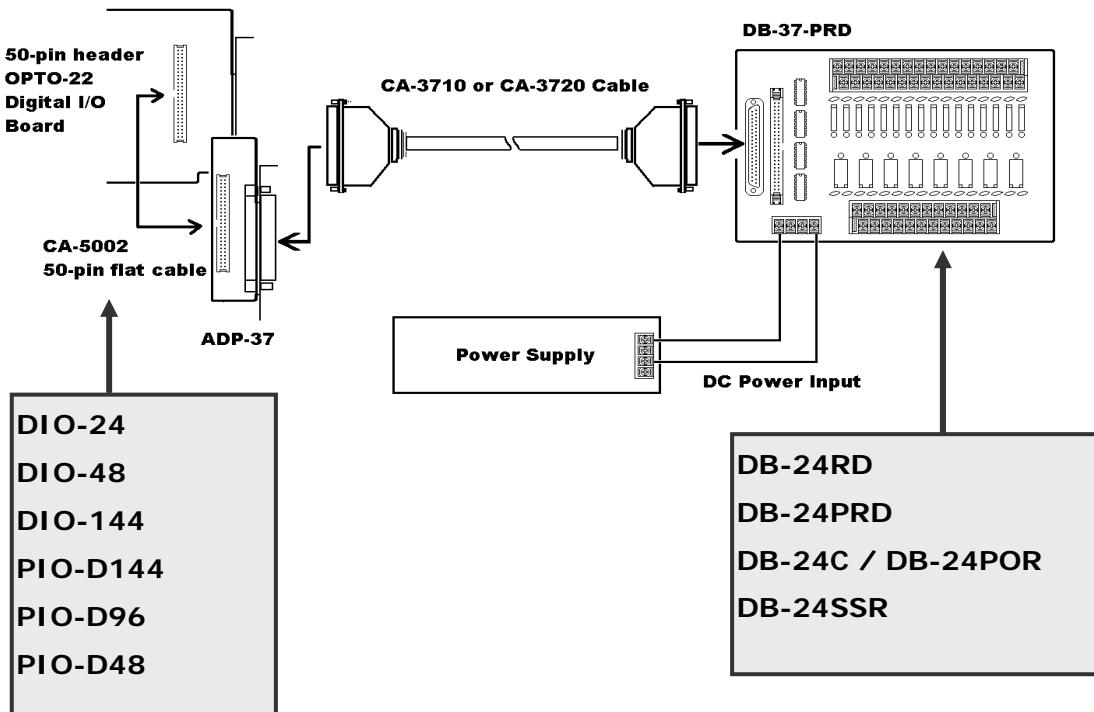

- Connect to 37-pin D-sub connector

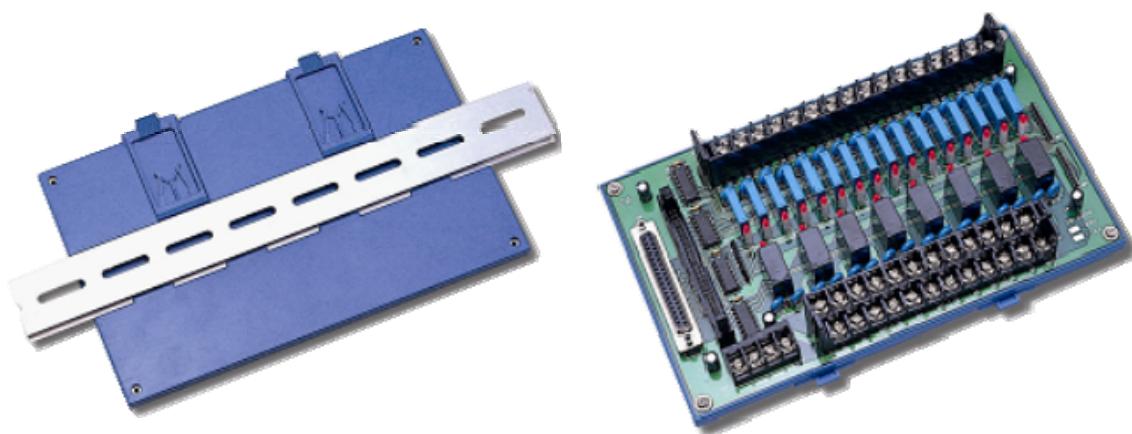

- 50-pin header converts to 37-pin D-sub connector via the ADP-37

## 12.2. DIN-Rail Mounting

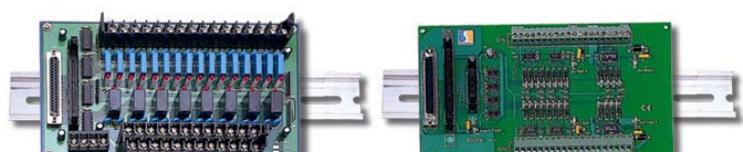

The DB-24P, DB-24R, DB-24PR, DB-24C, DB-24POR, DB-24SSR, DB-16P8R series daughter boards can choose DIN-OPTO22 kit for DIN-Rail mounting.

**DB-24P/DIN**

**DB-24PD/DIN**

**DB-24R/DIN**

**DB-24RD/DIN**
